

UNIT 13 REVIEW TEST LISTENING SCRIPT

Emily: 'morning Jian.

Jian: Hi, Emily. Whoa. You look pretty tired. What did you do last night?

Emily: I couldn't sleep at all last night. So, I stayed up and watched TV most of the night.

Jian: Oh, huh. Did you watch anything interesting?

Emily: I did actually. It was a show about animals.

Jian: Oh, cool.

Emily: Yea, it's interesting that some kinds of animals are so intelligent. For example, elephants. Did you know that they can use tools just like humans?

Jian: Really? What do they use the tools for?

Emily: Well, they use boxes to get things in high places. The elephants move the boxes to help them get food. They also use wood to cover water holes because they don't want other animals to drink the water. They can plan—it's very smart.

Jian: Hmm, interesting. What about other animals?

Emily: Chimpanzees are another example. They also use pieces of wood to find food, like ants.

Jian: I've heard that they can also use language like people. Is that true?

Emily: Well, sort of. Obviously, they can't speak. Their mouths can't make sounds like people. But chimpanzees *can* learn words. So they move their hands and point at pictures to tell scientists things.

Jian: Can they make sentences?

Emily: Not really. They can't use the words with grammar. Scientists try very hard to teach chimpanzees to do this, but they just can't learn these rules.

Jian: Looks like we're much smarter than chimpanzees then!

Emily: I hope you're not surprised by that. Anyway,...
